

## About

LibreOffice is an open source office suite for the Linux, Mac OS X and Windows operating systems. The suite includes six main products: Writer (a word processor), Calc (a spreadsheet program), Impress (a presentation editor and viewer), Draw (a diagram builder), Base (a database manager) and Math (an equation editor).

Lanedo is a successful European company that provides open source and free software consultancy services globally. Targeting platforms ranging from embedded devices to desktops, Lanedo provides first class software development services especially in open source communities enabling our clients to create world-class products.

## LibreOffice @ Lanedo

As a proud supporter of the Document Foundation, Lanedo has been part of the LibreOffice Engineering Steering Committee (ESC) since its inception in 2011.

Several of our employees are LibreOffice upstream contributors, who are active in the LibreOffice bug tracker and take part in online discussions about LibreOffice. We also attend most events around LibreOffice, such as hackfests and conferences.

Our past clientèle has included large government bodies as well as private businesses. We have provided solutions to our clients covering macro development (to help improve day to day efficiency), disabling parts of the interface (e.g. some toolbars and menus), to full blown extensions which add menu items, toolbars and dialogs to help achieve a new feature.

## Services

Lanedo offers a range of services for LibreOffice, from purpose built tailored extensions to custom builds, upstream work and bug fixing. If your business is looking for migration from another office suite, we can help there too. Lanedo are partnered with support firms which can also assist you in training your staff to use LibreOffice.

## Bespoke LibreOffice Extensions

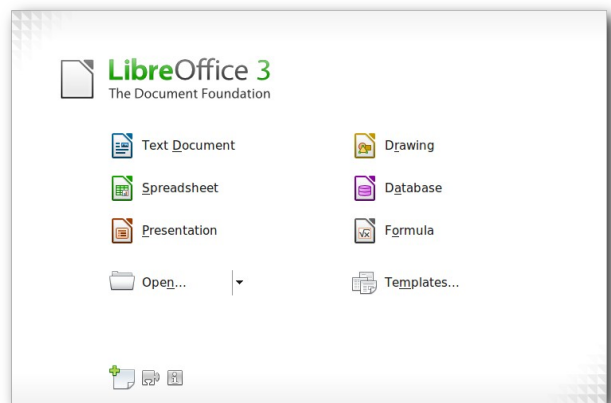

There are several ways to extend LibreOffice's functionality. Repetitive tasks can be automated by writing simple macros, which will increase the efficiency of your staff. LibreOffice also comes with a very powerful extension framework, which allows for quick development of features for your specific use cases. Lanedo has experience developing macros and extensions that run on all major computing platforms (Linux, Windows, Mac), in a programming language of your choice (C++, Python, Java or BASIC).

## Custom Builds

Do you need to have your own branded LibreOffice? Do you have a need for new features that are so closely tied to the core of LibreOffice that they cannot be done in an extension? Lanedo can help you and deliver a customized LibreOffice build, including personalization and branding to match your company's image/colors.

## Upstream Work & Bug Fixing

Do you have a specific problem that refrains your company from using LibreOffice to its fullest potential? Lanedo solves your problems in cooperation with the upstream project and works with the community to integrate fixes back into the LibreOffice project in accordance with the policies required by the maintainers. That way, the next public release of LibreOffice ships with your specific problem already resolved.

## Migration & Training

Through close collaboration with companies such as Natural Computing and Ars Aperta, Lanedo is able to support migration from proprietary office suites to LibreOffice and offer LibreOffice training for your employees. Call us to find out how!

## Contact us

With leading expertise from developers in open source communities at your command, Lanedo can offer support contracts, development, patch back folding, customization of a project or simply an evaluation.
